### **DETAILED ACTION**

#### Election/Restrictions

1. Applicant's election with traverse of Group I (claims 1-7 and 21-30) in the reply filed on 4/10/2006 is acknowledged. The traversal is on the ground that that no serious burden exists in examining all the pending claims. This is not found persuasive because for purposes of the initial requirement, a serious burden on the examiner may be *prima facie* shown if the examiner shows by appropriate explanation of separate classification, or separate status in the art, or a different field of search (as defined in MPEP § 808.02). The restriction requirement clearly meets this requirement. While that *prima facie* showing may be rebutted by appropriate showings or evidence by the applicant, an *unsupported* statement by applicant that no serious burden would exist in the examination of all pending claims does not qualify as an "appropriate showing" or "evidence". See MPEP 803. The requirement is still deemed proper and is therefore made FINAL.

### Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 1775

2. Claims 1-2, 4-5, 7, 25-27 are rejected under 35 U.S.C. 102(b) as being anticipated by Atita (U.S. 5,472,795).

- 3. Atita teaches a nanolaminate of zirconium oxide containing a thin layer of polycrystalline metastable tetragonal zirconia deposited on a support (substrate) (abstract). The average crystal (particle) dimension is preferably less than 13 nm (column 3 line 67-68; column 4 line 1) and would inherently be spherical. Atita further teaches that the zirconia can be 100% tetragonal zirconia (column 10 line 5-30) substantially free of stabilizing dopant (oxides) (column 6 line 33-35).
- 4. Claims 1, 3-4, 6, 29 are rejected under 35 U.S.C. 102(b) as being anticipated by Montino (U.S. 5,002,909).
- 5. Montino teaches spherical particles of mixed oxides of alumina and zirconia, stabilized at room temperature in a crystalline tetragonal phase, consisting essentially of non-agglomerates particles (monodispersed), and having a particle size from .1 to 1 micrometer (column 3 line 15-20, 25-30, 55-60).

## Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 1775

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

- 7. Claims 21-23, and 25-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Atita (U.S. 5,472,795) in view of Allen (U.S. 6,652,987).
- 8. Atita, discussed above, is silent as to the presence of a metal substrate. However Atita does teach that the substrate can be virtually any desired material (column 3 line 22-24), and that the invention provides a tough coating that will adhere to an unheated substrate regardless of its chemical nature (column 3 line 33-35).
- 9. Allen teaches that it is known in the art to use tetragonal zirconium oxide thermal barrier coatings on metals, in applications such as turbine engines, for reducing radiation heat transfer and reducing metal temperatures and cooling requirements (column 1 line 5-37).
- 10. It would have been obvious to one of ordinary skill in the art at the time of the invention to put the coating of Atita on a metal substrate because the substrate can be virtually any desired material, and that the invention provides a tough coating that will adhere to an unheated substrate regardless of its chemical nature; and it is known to use a tetragonal zirconium oxide thermal barrier coatings metal substrate in applications such as turbine engines, for reducing radiation heat transfer and reducing metal temperatures and cooling requirements.

Art Unit: 1775

11. Claims 1, 3-4, 6, 21-22, 24-26, 28-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Leushake (U.S. 6,168833 B1) in view of Allen (U.S. 6,652,987).

- 12. Leushake teaches a coating process (abstract), used in coating with ceramic layers (metal) internal combustion or turbine engines (column 3 line 18-36). In creating a coating the process first creates monodispersed, (free of other oxides) unstabilized zirconium oxide powder or particles (column 5 line 60-63; column 6 line 1-43). Exemplary of the invention are coarse particles with an average diameter of 570 nm and fine particles having an average diameter of 300 nm (Example II). However, the reference is silent as to the zirconium oxide being in tetragonal phase.
- 13. Allen teaches that it is known in the art to use tetragonal zirconium oxide thermal barrier coatings on metals, in applications such as turbine engines, for reducing radiation heat transfer and reducing metal temperatures and cooling requirements (column 1 line 5-37).
- 14. It would have been obvious to one of ordinary skill in the art at the time of the invention to use the coating of Leushake with tetragonal zirconia because it is known to use a tetragonal zirconium oxide thermal barrier coatings metal substrate in applications such as turbine engines, for reducing radiation heat transfer and reducing metal temperatures and cooling requirements.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniel Miller whose telephone number is (571) 272-1534. The examiner can normally be reached on M-F/Th.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jennifer McNeil can be reached on (571) 272-1540. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
